DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on April 11, 2002 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U. S. Pat. 6,037,694 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim 1 recites that "said pair of opposite flat surfaces face an inner circumferential side and an outer circumferential side, respectively, relative to a radial

Art Unit: 2834

direction of said cylindrical portion". The application as originally filed does not disclose the opposite flat surfaces facing the inner and outer sides of the cylindrical portion, relative to the radial direction. The application as originally filed discloses that the inner flat surface of the winding faces the outer side of the cylindrical portion of the bobbin. In order to have a flat surface of the winding facing the inner side of the cylindrical portion of the bobbin, the field winding would have to be wound at the inner side of the cylindrical portion of the bobbin. The application as originally filed shows the winding being wound at the outer side of the cylindrical portion of the bobbin.

Response to Arguments

Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.
